

Introduction to Semantic Web

Ivan Herman

The Music site of the BBC

The screenshot shows the BBC Music website for Eric Clapton. The browser address bar displays the URL: <http://www.bbc.co.uk/music/artists/618b6900-0618-4f1e-b835-bccb17f84294>. The page features a blue navigation bar with the 'MUSIC BETA' logo and links for GENRES, ARTISTS, REVIEWS, NEWS, and BLOG. A search bar labeled 'QUICK FIND' is present with the placeholder text 'Enter an artist name ...'. Below the navigation bar, the breadcrumb trail reads 'BBC Music > Artists > Eric Clapton'. The main header area includes the artist's name 'Eric Clapton' and his birth date 'Born 30 March 1945.' To the right, there is a 'MOST PLAYED ON BBC RADIO 2' badge. The central content area is divided into two columns. The left column features a large photograph of Eric Clapton playing a light blue electric guitar on stage, with the caption 'David Redfern/Redferns' at the bottom right. Below the photo is a 'Biography' section with the following text: 'Eric Patrick Clapton, CBE (born 30 March 1945) is an English blues-rock guitarist, singer, songwriter and composer. Clapton has been inducted into the Rock and Roll Hall of Fame as a solo performer, as a member of rock bands; the Yardbirds and Cream. Clapton is the only person ever to be inducted three times. Often viewed by critics and fans alike as one of the most important and influential guitarists of all time, Clapton was ranked fourth in Rolling Stone magazine's list of the "100 Greatest Guitarists of All Time" and #53 on their list of the Immortals: 100 Greatest Artists of All Time.' The right column contains a 'Latest Tracks Played On The BBC' section with five entries: 'Promises' (BBC Radio 2 | Ken Bruce 22/02/2010), 'Bad Love' (BBC Radio 2 | Alex Lester 22/02/2010), 'Lay Down Sally' (BBC Radio 2 | Chris Evans Breakfast 18/02/2010), 'I Ain't Gonna Stand For It' (BBC Radio 2 | Alex Lester 15/02/2010), and 'Wonderful Tonight' (BBC Radio 2 | Ken Bruce 10/02/2010). Below this is an 'Audio Previews From Latest Album Review' section featuring a small image of Clapton and a list of tracks: 'Me And Mr Johnson' (8), 'Milkcow's Calf Blues', and 'Come on in My Kitchen' (10).

this focus, he is credited as an innovator in a wide variety of genres. These include blues-rock (with John Mayall & the Bluesbreakers and The Yardbirds) and psychedelic rock (with Cream). Clapton's chart success was not limited to the blues, with chart-toppers in Delta Blues (Me and Mr. Johnson), pop ("Change the World") and reggae (Bob Marley's "I Shot the Sheriff") (He is often credited for bringing reggae and Bob Marley to the mainstream.) Two of his most successful recordings were the hit love song "Layla", which he played with the band Derek and the Dominos, and Robert Johnson's "Crossroads", which has been his staple song since his days with Cream.

Latest News Stories

How to build such a site 1.

- ▶ Site editors roam the Web for new facts
 - may discover further links while roaming
- ▶ They update the site manually
- ▶ And the site gets soon out-of-date 🙄

How to build such a site 2.

- ▶ Editors roam the Web for new data published on Web sites
- ▶ “Scrape” the sites with a program to extract the information
 - Ie, write some code to incorporate the new data
- ▶ Easily get out of date again...

How to build such a site 3.

- ▶ Editors roam the Web for new data via API-s
- ▶ Understand those...
 - input, output arguments, datatypes used, etc
- ▶ Write some code to incorporate the new data
- ▶ Easily get out of date again... 🤖

The choice of the BBC

- ▶ Use external, public datasets
 - Wikipedia, MusicBrainz, ...
- ▶ They are available as data
 - not API-s or hidden on a Web site
 - data can be extracted using, eg, HTTP requests or standard queries

In short...

- ▶ Use the Web of Data as a Content Management System
- ▶ Use the community at large as content editors

And this is no secret...

NEWS FROM THE BBC

Clapton recovering after surgery
Tue 27 Oct 2009 17:46 Musician Eric Clapton is recuperating after having an operation to remove gallstones,...

Clapton to use a slowhand to take Wyman's wicket

Data on the Web

- ▶ There are more and more data on the Web
 - government data, health related data, general knowledge, company information, flight information, restaurants,...
- ▶ More and more applications rely on the availability of that data

But... data are often in isolation, “silos”

Imagine...

- ▶ A “Web” where
 - documents are available for download on the Internet
 - but there would be no hyperlinks among them

And the problem is real...

The image shows three overlapping web browser windows. The top-left window is titled "CoCoDat - Collation of Cortical Data - Mozilla Firefox" and displays the CoCoDat homepage. The top-right window is titled "Cell Centered Database - Mozilla Firefox" and shows the "Cell Centered Database Gallery" with a navigation menu. The bottom window is titled "NeuronDB = Thalamic relay neuron - Overview (A) () - Mozilla Firefox" and displays a detailed overview of a thalamic relay neuron, including a diagram and a list of compartments.

CoCoDat: Collation of Cortical [Data]
microcircuitry] Data

CoCoDat is a microcircuitry database that publishes experimental reports. The data (anatomical and cellular compartment), as well as the

- Morphology
- Firing properties
- Ionic currents
- Ionic conductances
- Synaptic currents
- Connectivity

The database is available for download of data tables but also a Search Board with manual or automatic relaxation of the search

- Brain region
- Layer
- Neuron type

Done

Data on the Web is not enough...

- ▶ We need a proper infrastructure for a real Web of Data
 - data is available on the Web
 - accessible via standard Web technologies
 - data are interlinked over the Web
 - ie, data can be integrated over the Web
- ▶ This is where Semantic Web technologies come in

I.e.,... connect the silos

In what follows...

- ▶ We will use a simplistic example to introduce the main Semantic Web concepts

The rough structure of data integration

- ▶ Map the various data onto an abstract data representation
 - make the data independent of its internal representation...
- ▶ Merge the resulting representations
- ▶ Start making queries on the whole!
 - queries not possible on the individual data sets

We start with a book...

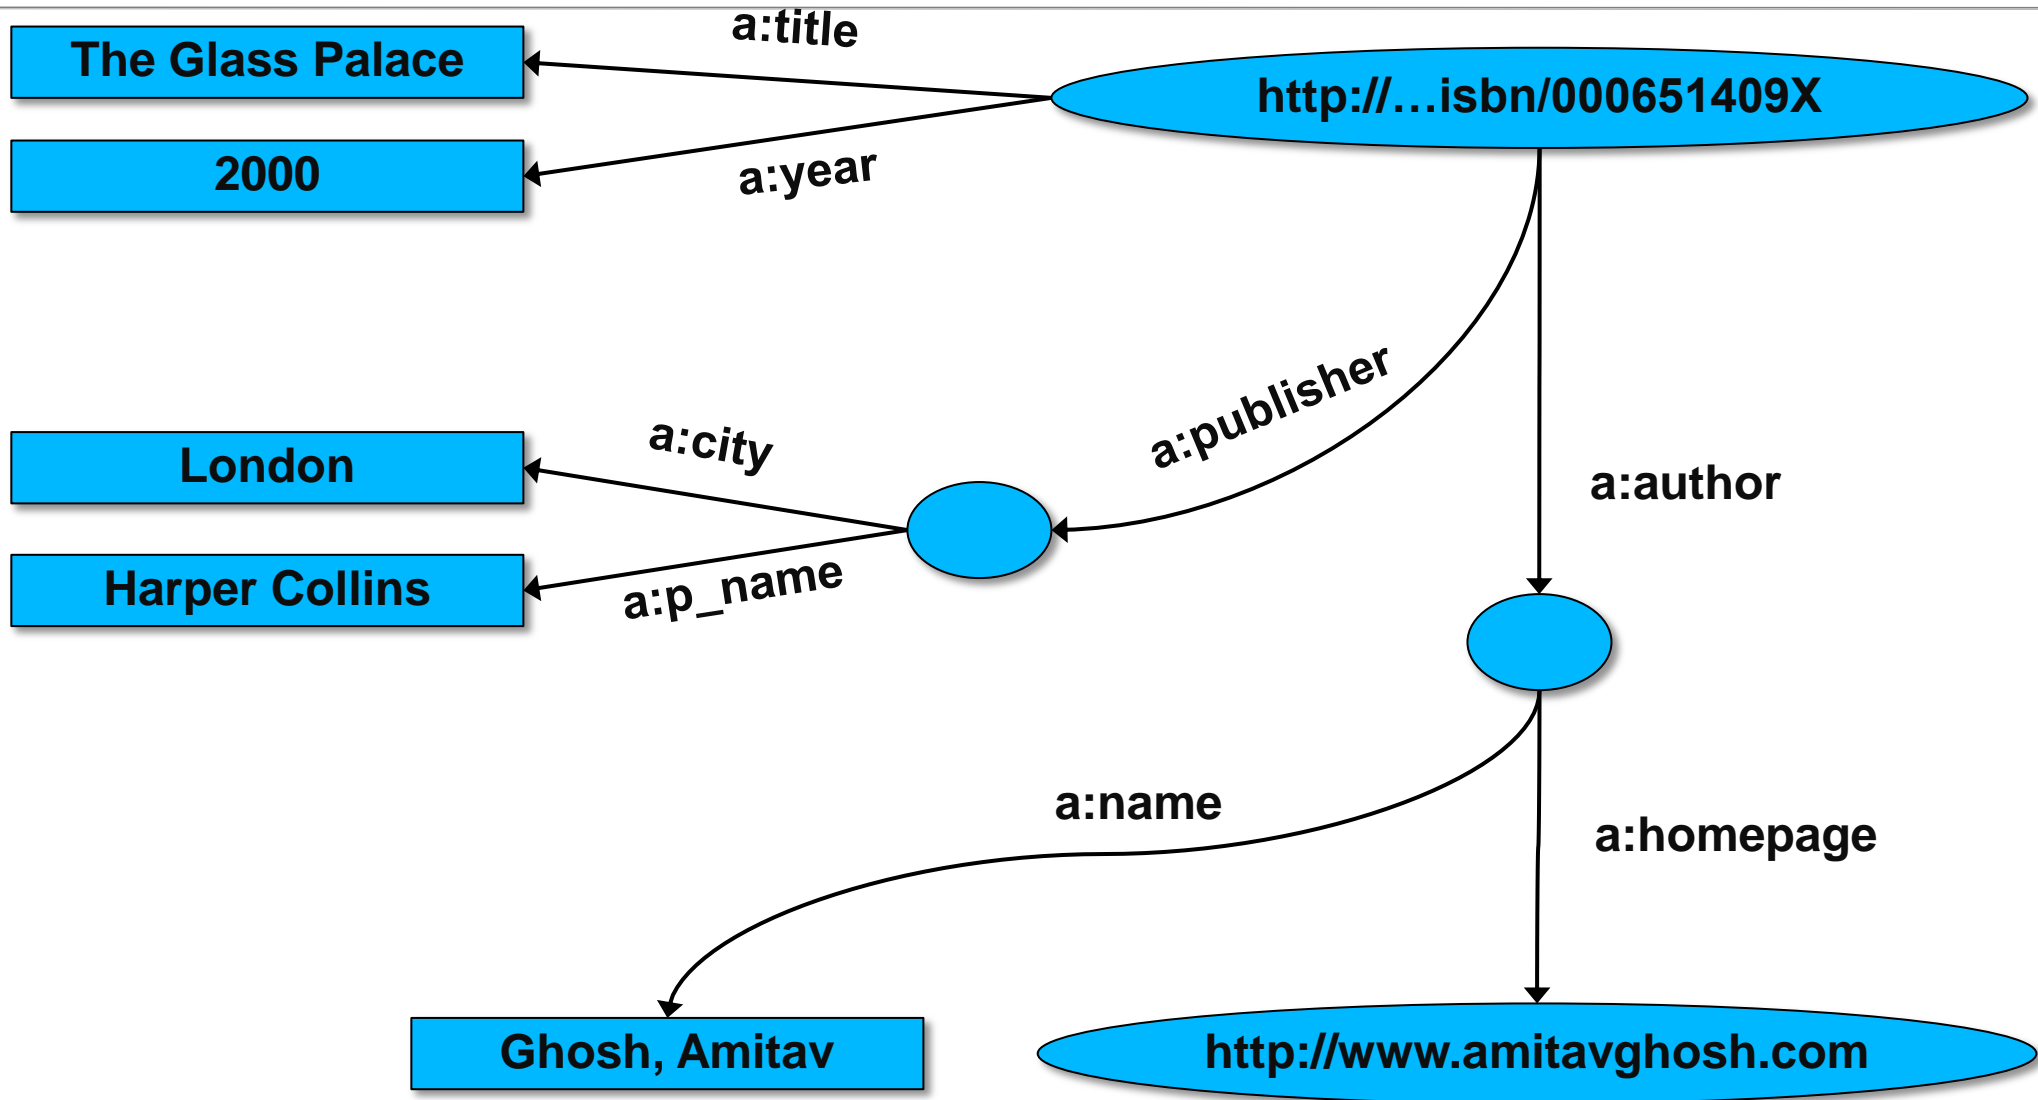

A simplified bookstore data (dataset “A”)

ISBN	Author	Title	Publisher	Year
0006511409X	id_xyz	The Glass Palace	id_qpr	2000

ID	Name	Homepage
id_xyz	Ghosh, Amitav	http://www.amitavghosh.com

ID	Publisher's name	City
id_qpr	Harper Collins	London

1st: export your data as a set of relations

Some notes on the exporting the data

- ▶ Relations form a graph
 - the nodes refer to the “real” data or contain some literal
 - how the graph is represented in machine is immaterial for now

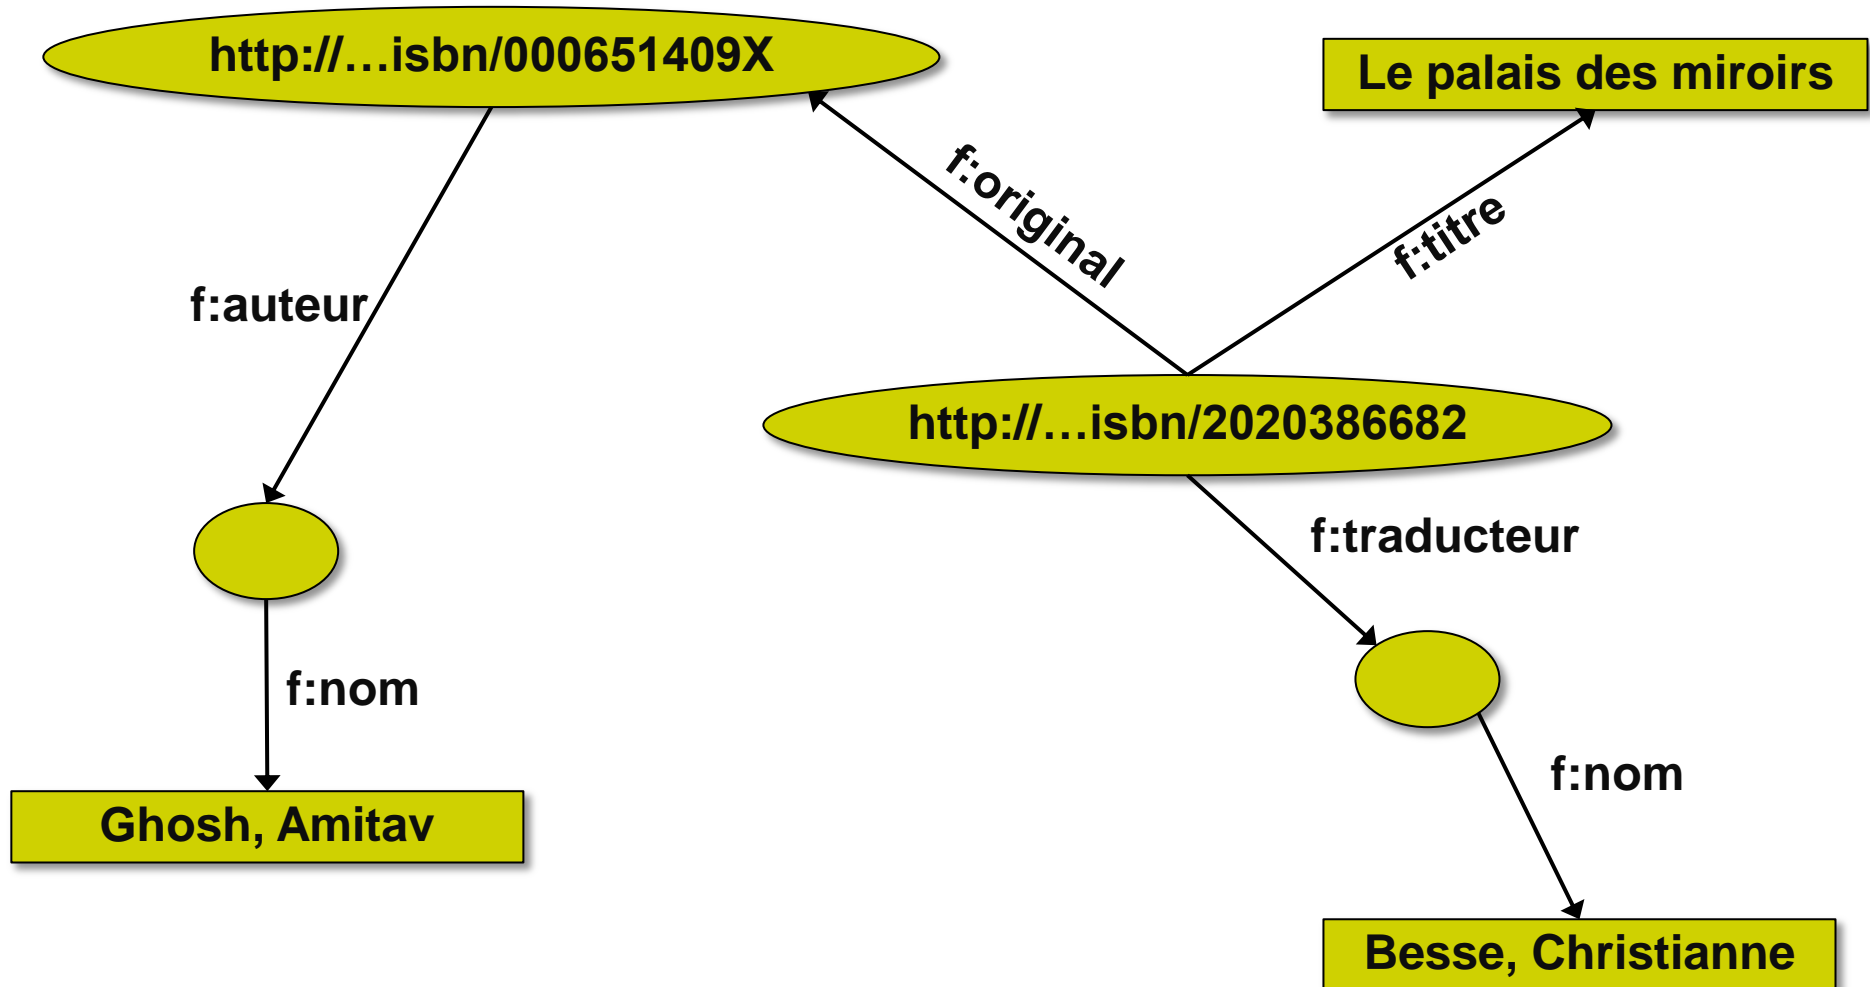

Same book in French...

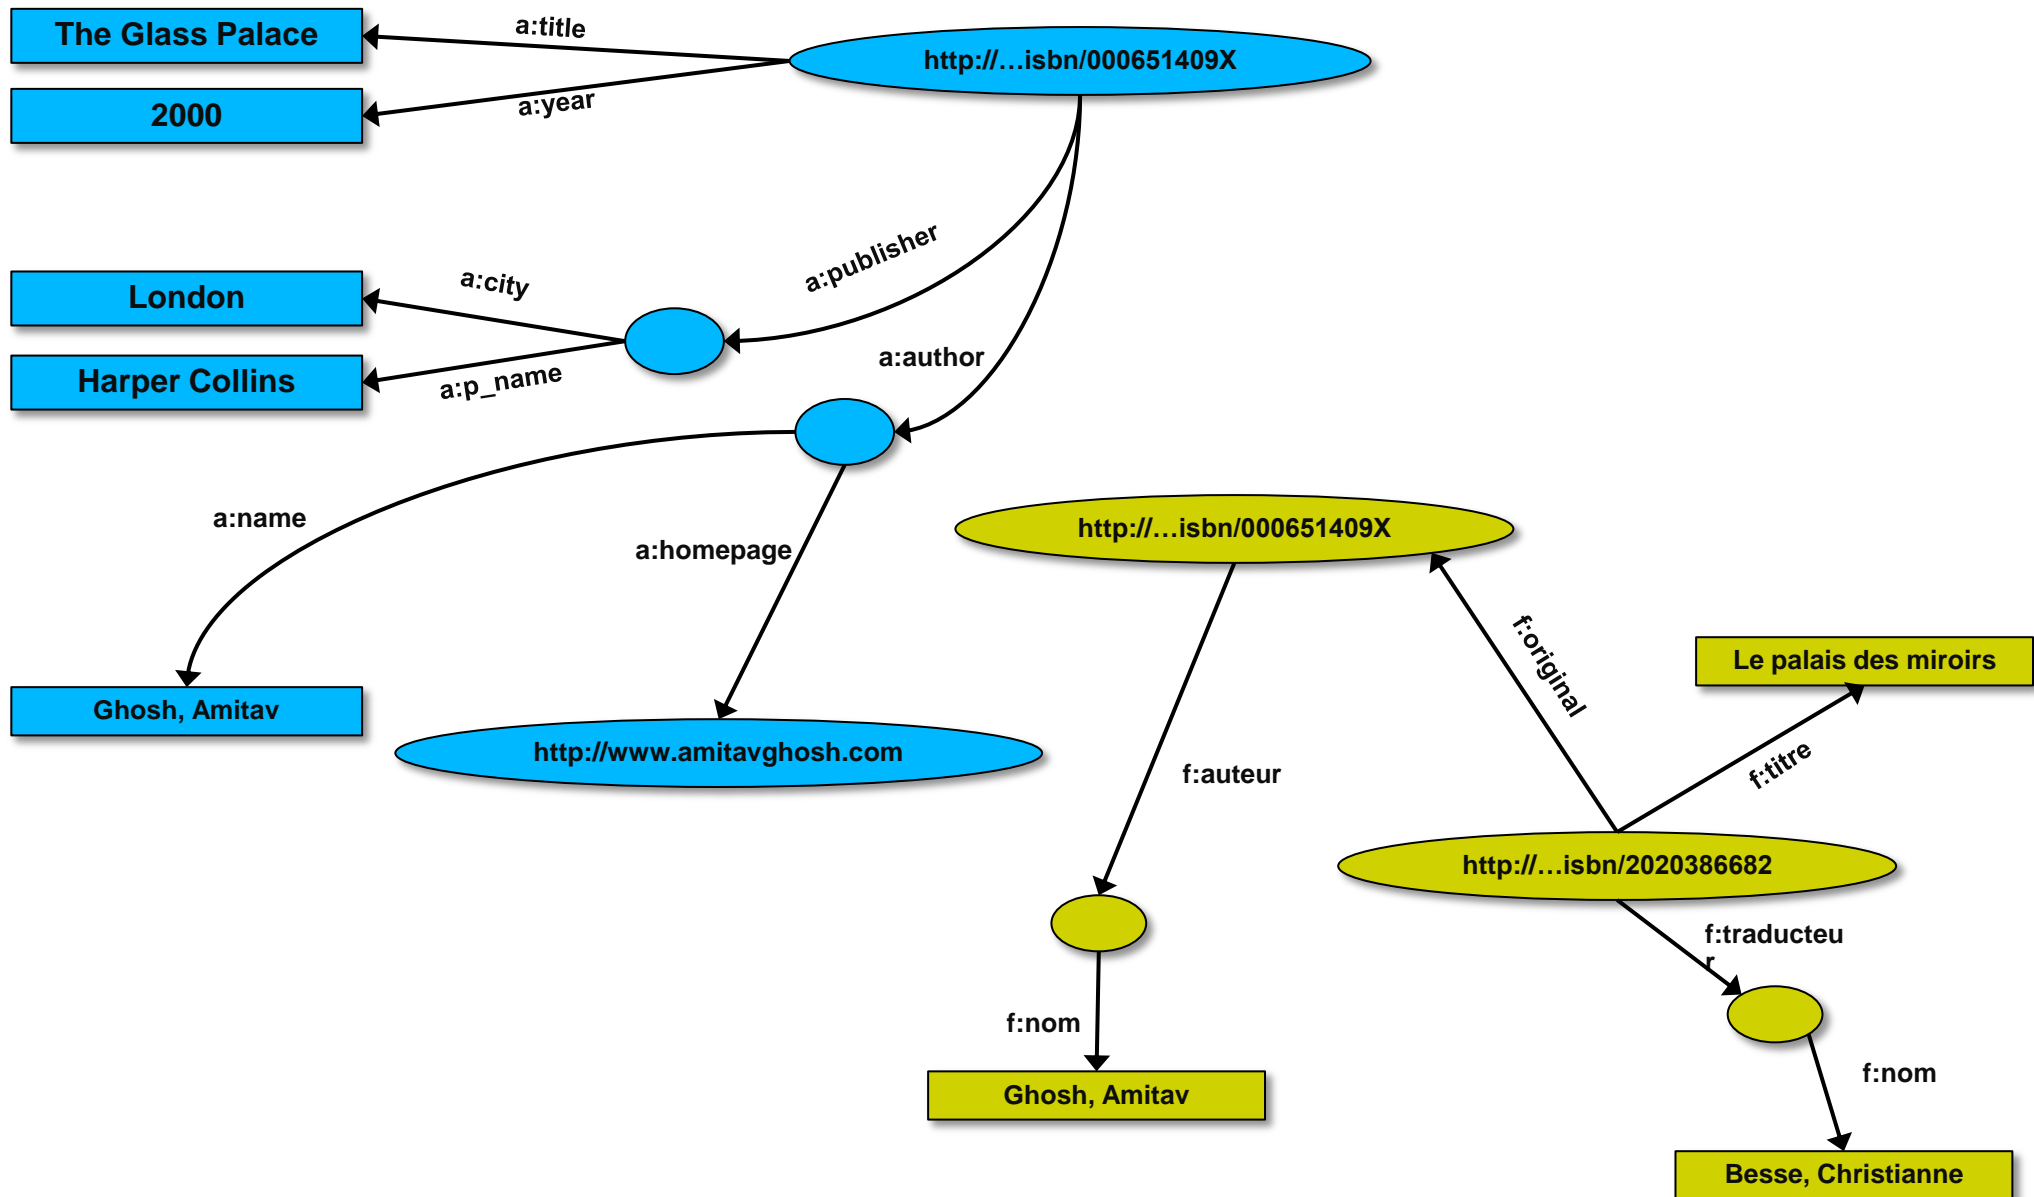

Another bookstore data (dataset "F")

	A	B	C	D
1	ID	Titre	Traducteur	Original
2	ISBN 2020286682	Le Palais des Miroirs	\$A12\$	ISBN 0-00-6511409-X
3				
4				
5				
6	ID	Auteur		
7	ISBN 0-00-6511409-X	\$A11\$		
8				
9				
10	Nom			
11	Ghosh, Amitav			
12	Besse, Christianne			

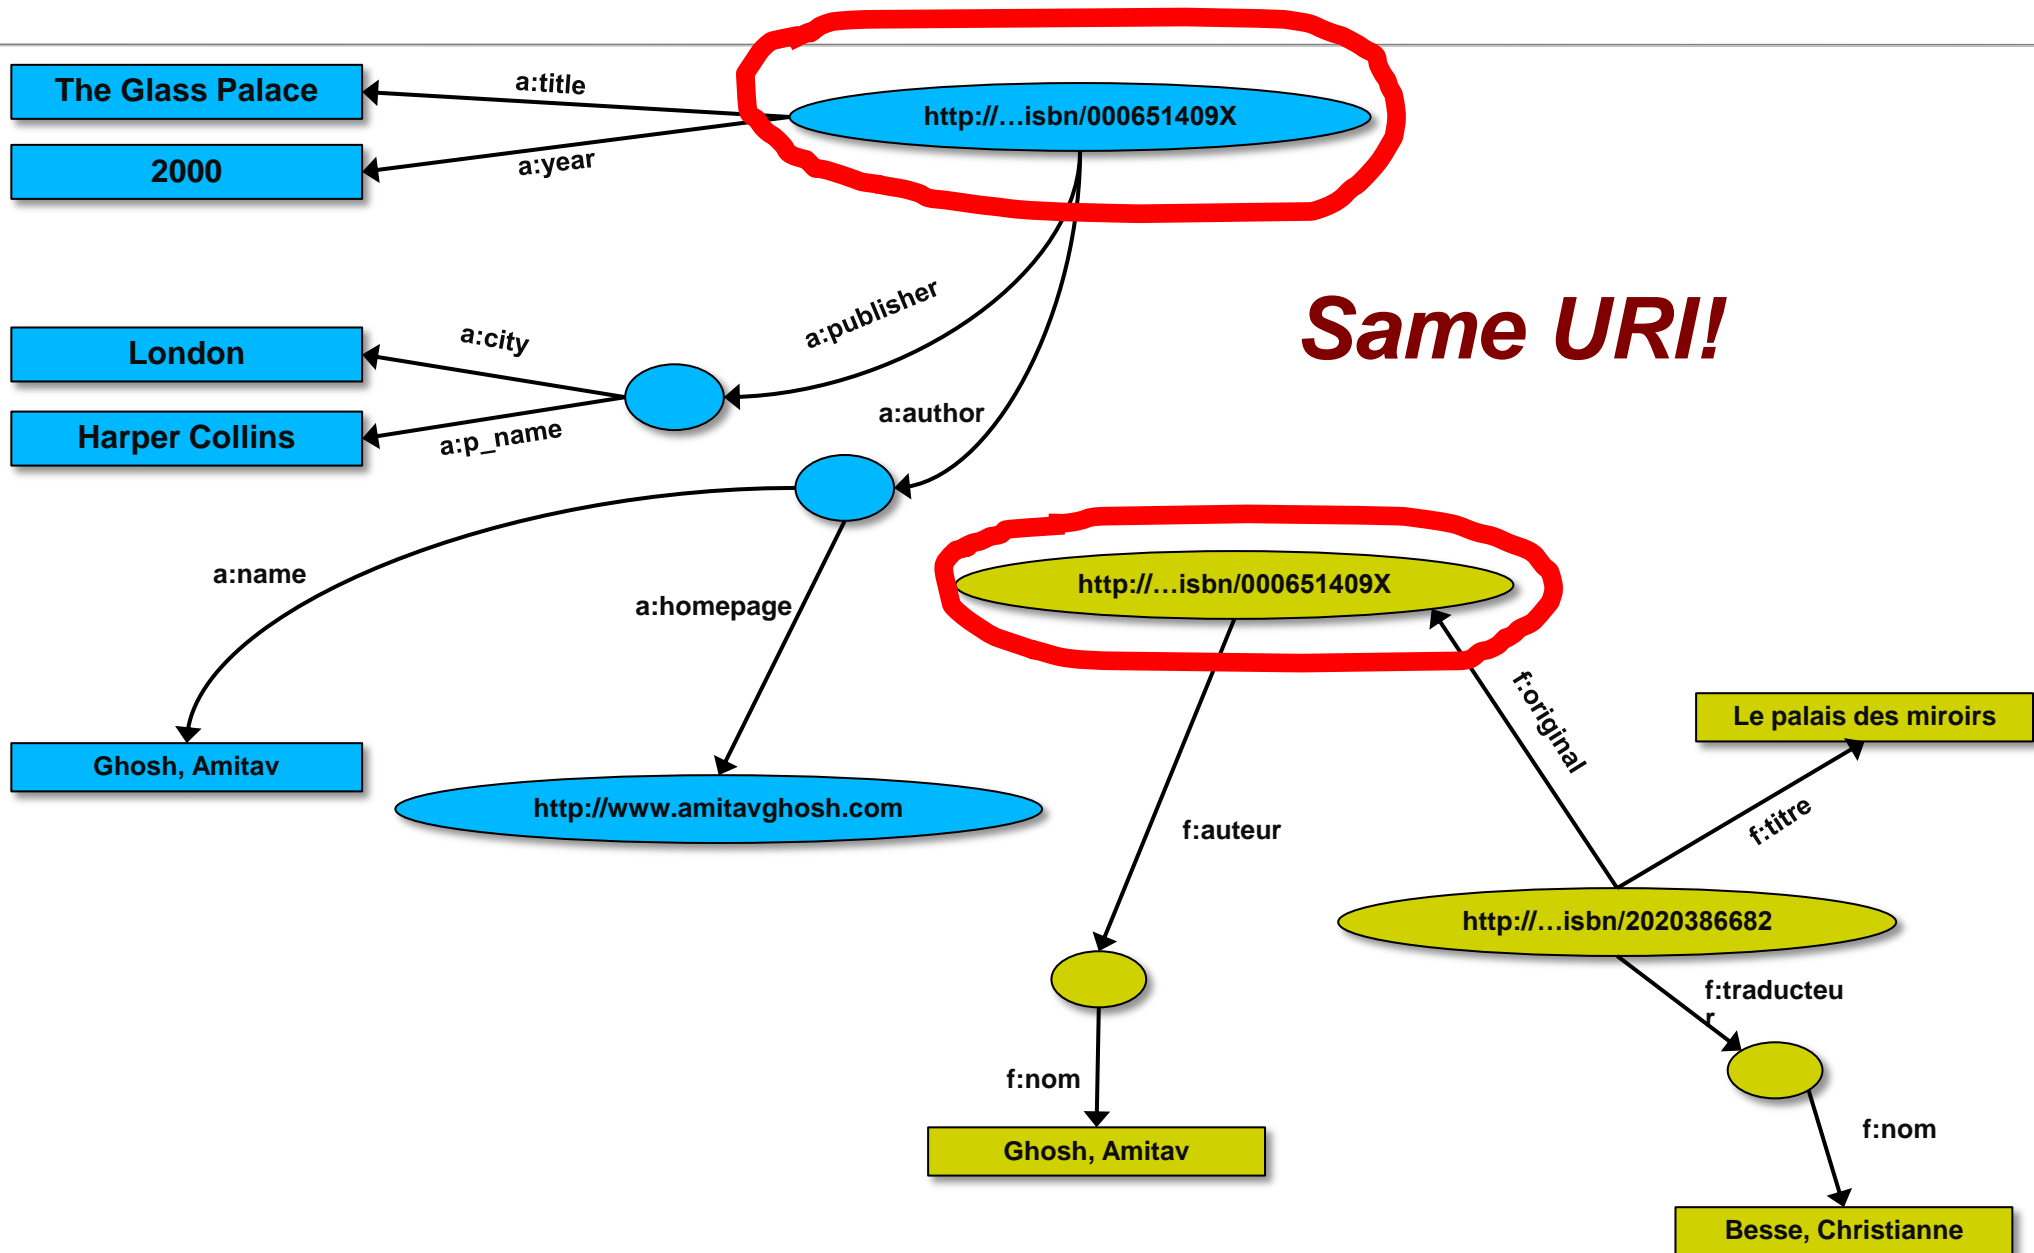

2nd: export your second set of data

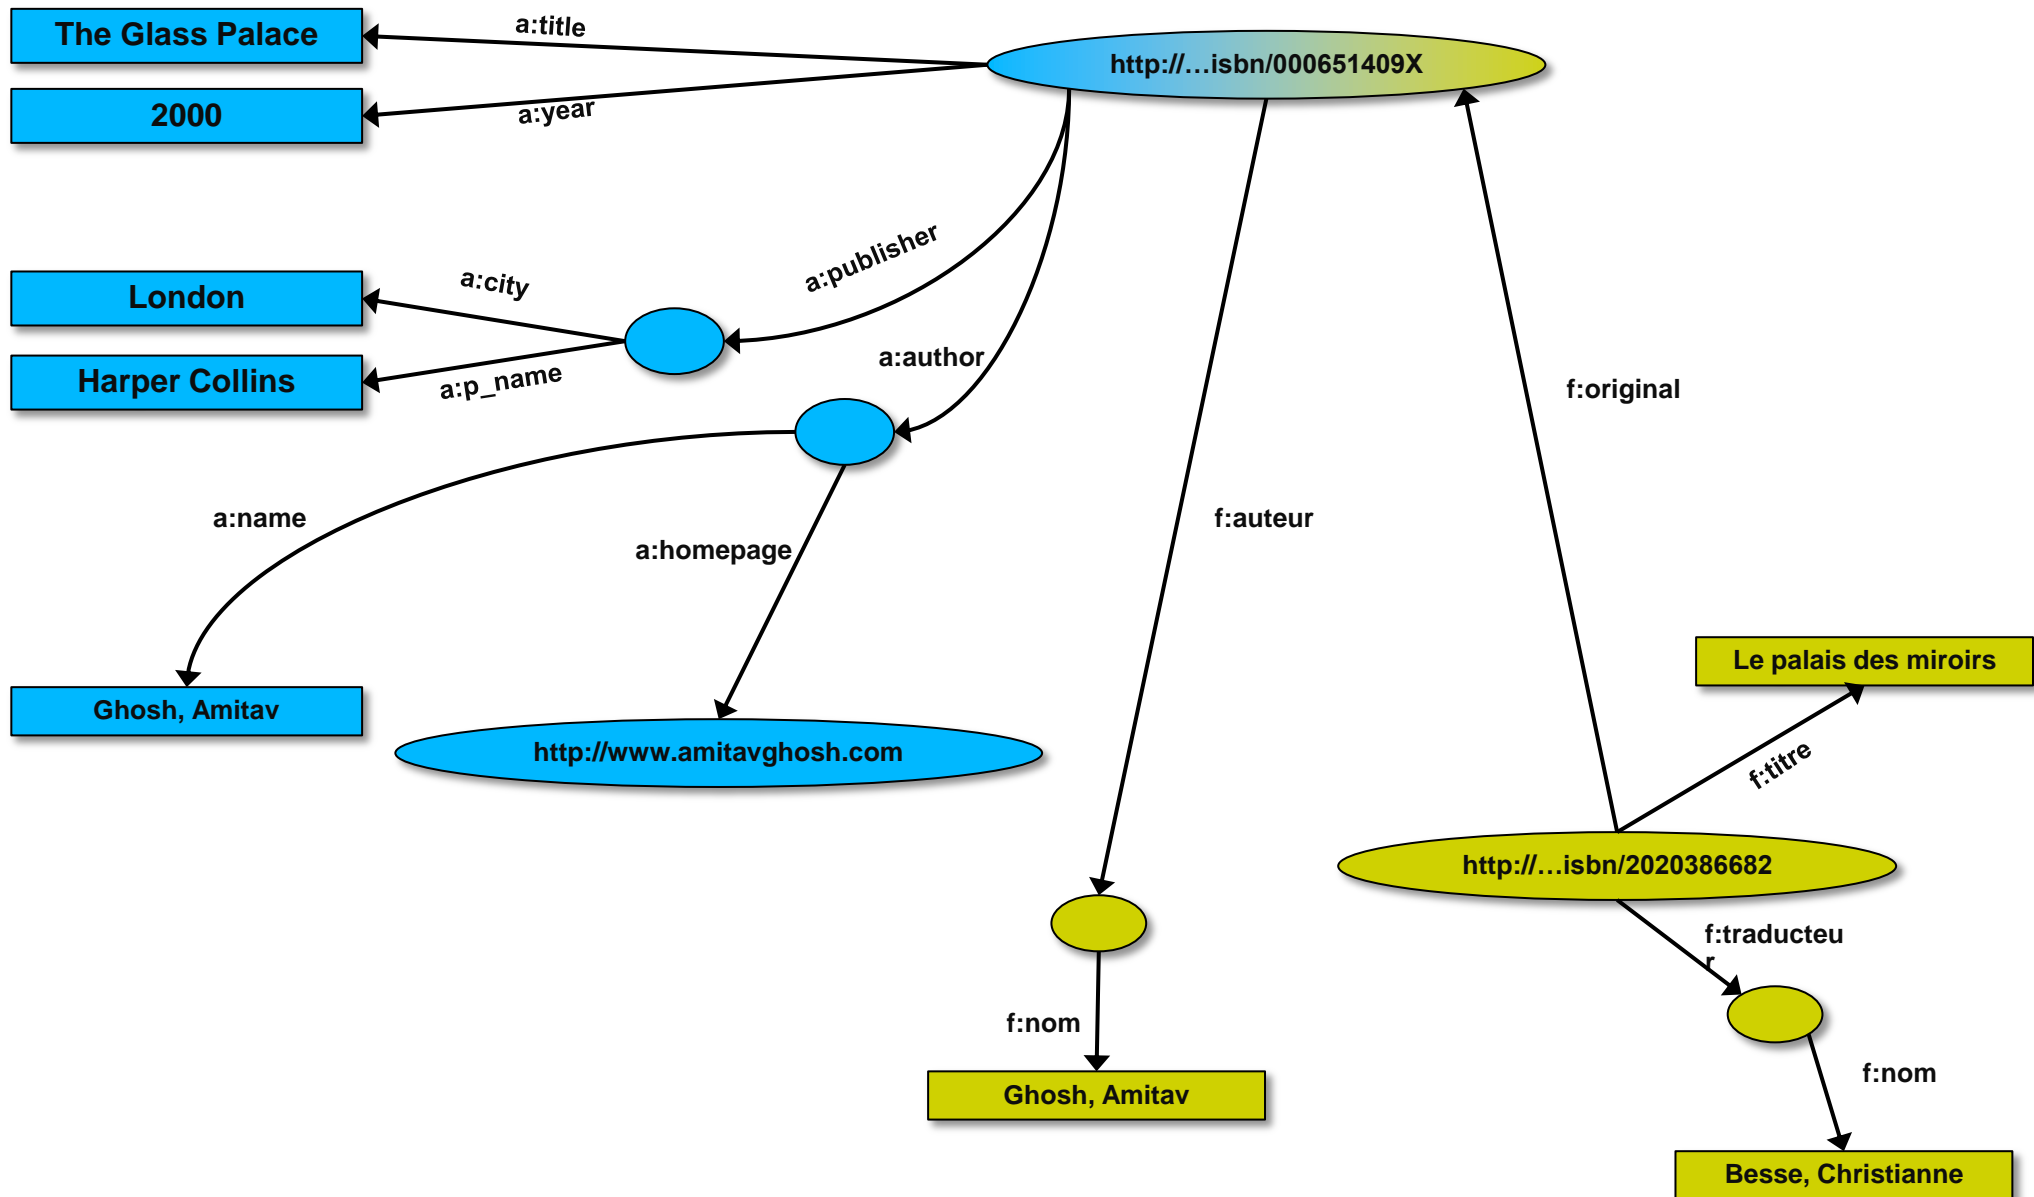

3rd: start merging your data

3rd: start merging your data (cont)

3rd: start merging your data

Start making queries...

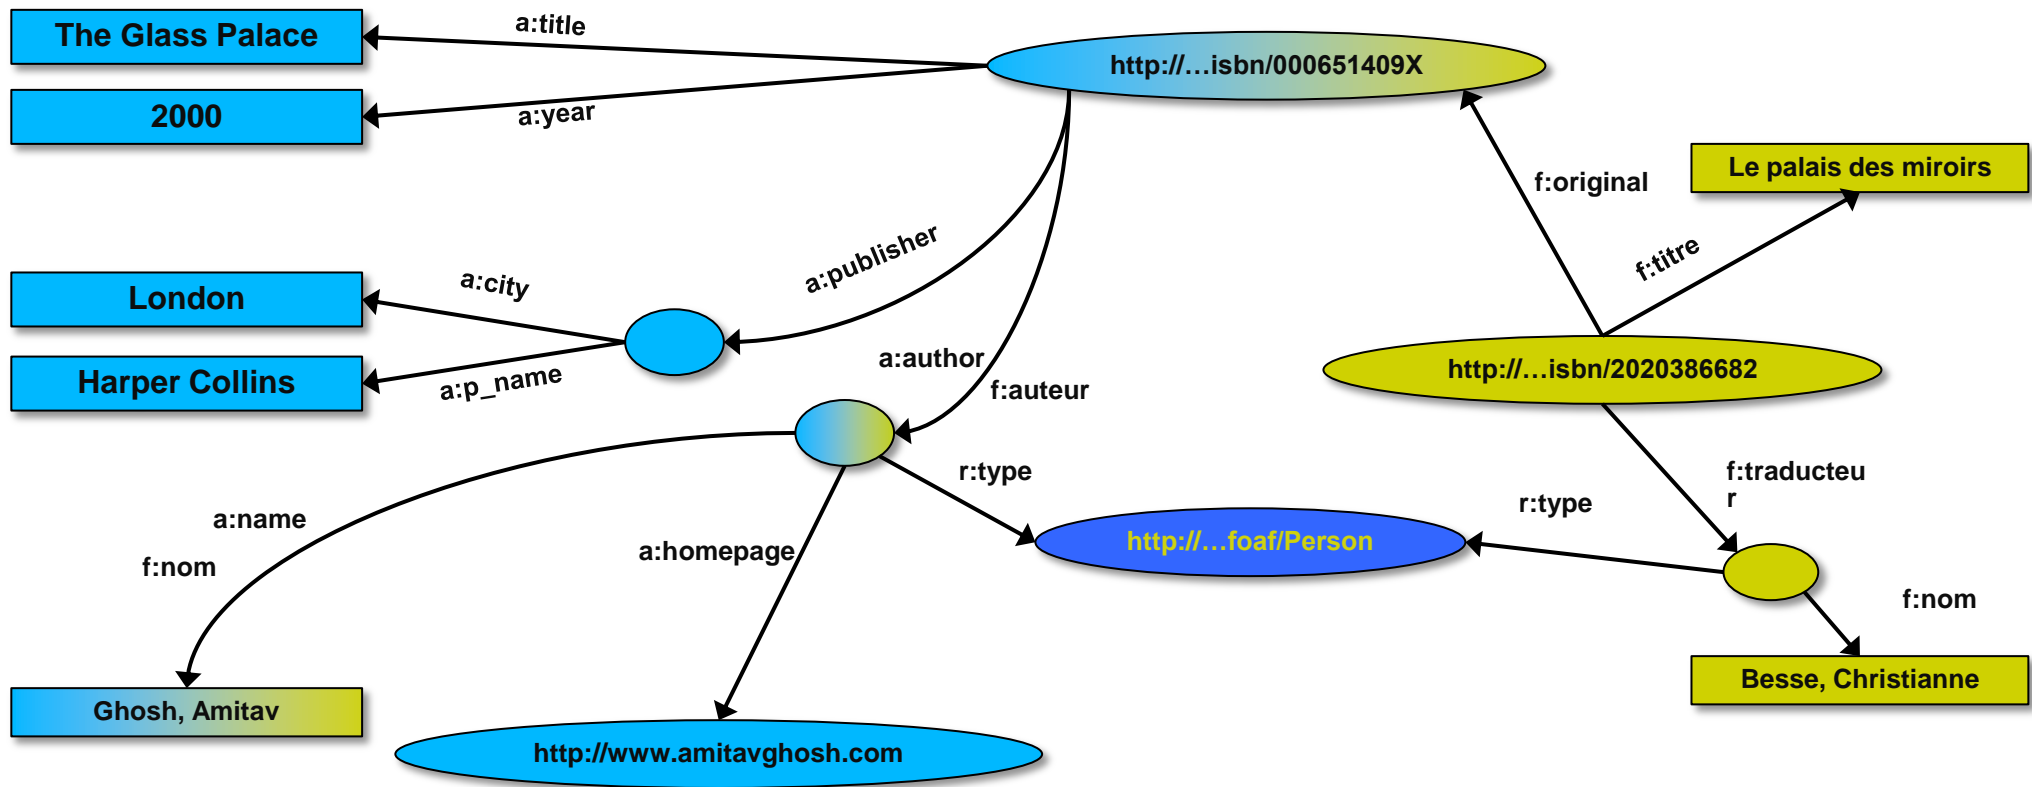

- ▶ User of data “F” can now ask queries like:
 - “give me the title of the original”
 - well, ... « donnes-moi le titre de l’original »
- ▶ This information is not in the dataset “F” ...
- ▶ ...but can be retrieved by merging with dataset “A”!

However, more can be achieved...

- ▶ We “feel” that a:author and f:auteur should be the same
- ▶ But an automatic merge does not know that!
- ▶ Let us add some extra information to the merged data:
 - a:author same as f:auteur
 - both identify a “Person”
 - a term that a community may have already defined:
 - a “Person” is uniquely identified by his/her name and, say, homepage
 - it can be used as a “category” for certain type of resources

3rd revisited: use the extra knowledge

Start making richer queries!

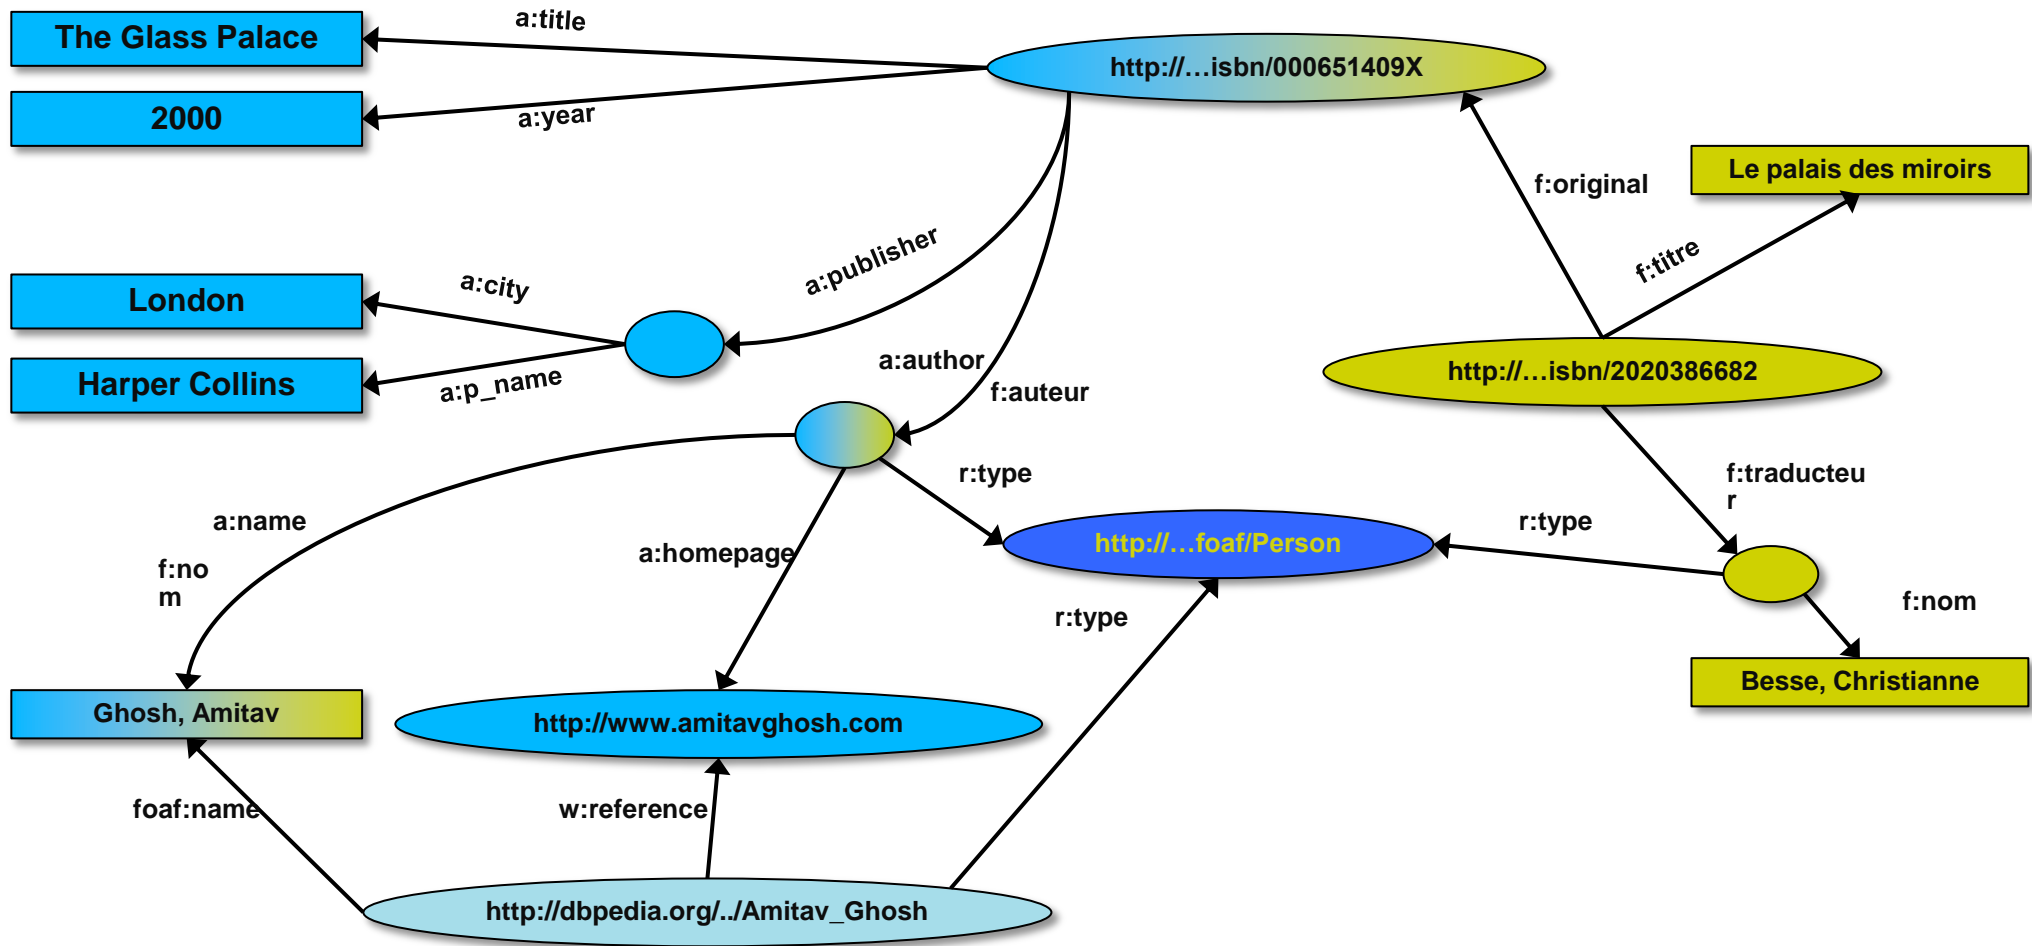

- ▶ User of dataset “F” can now query:
 - “donnes-moi la page d’accueil de l’auteur de l’original”
 - well... “give me the home page of the original’s ‘auteur’”
- ▶ The information is not in datasets “F” or “A”...
- ▶ ...but was made available by:
 - merging datasets “A” and datasets “F”
 - adding three simple extra statements as an extra “glue”

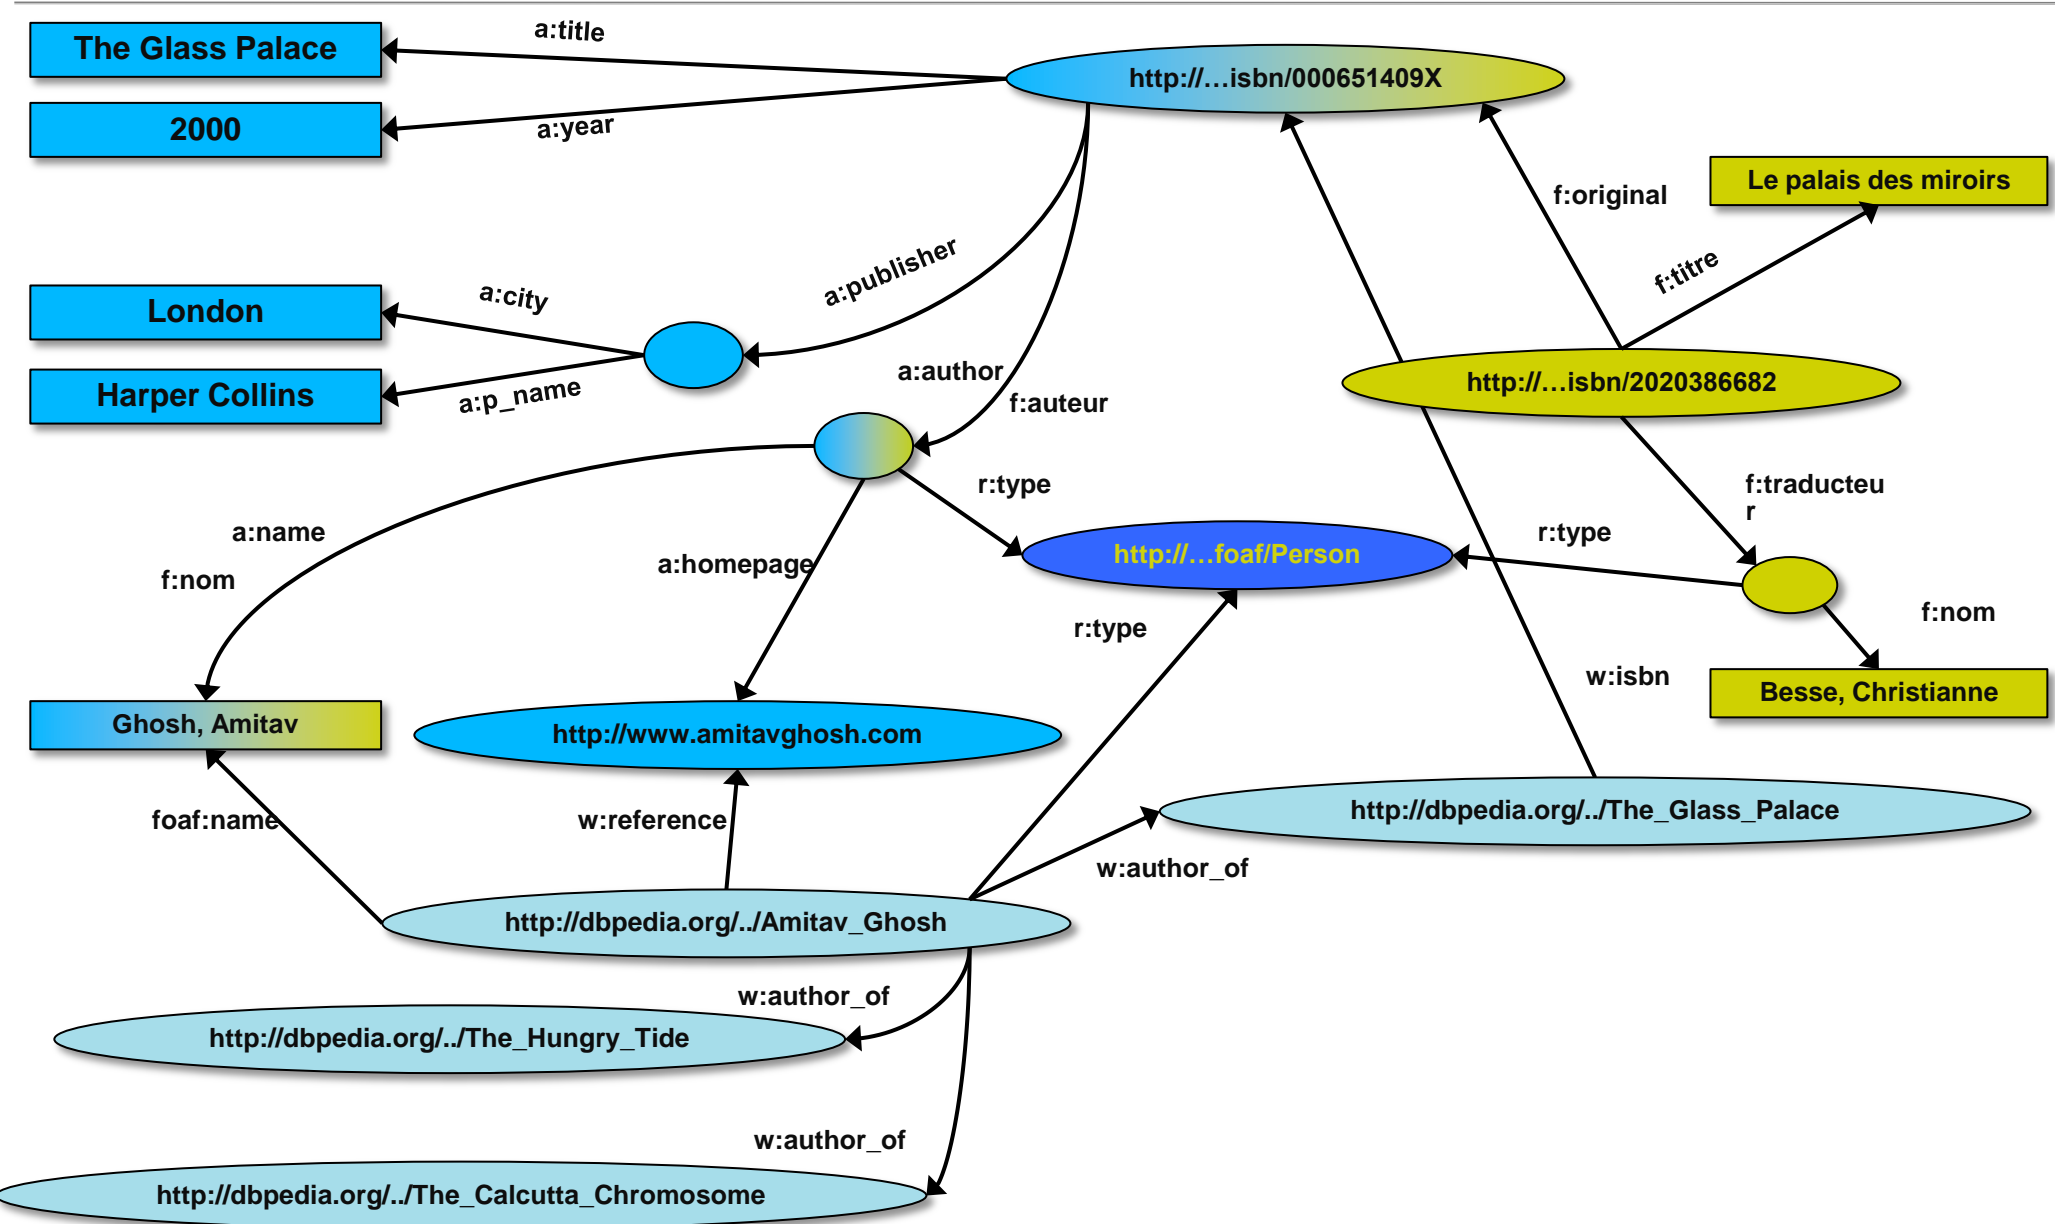

Combine with different datasets

- ▶ Using, e.g., the “Person”, the dataset can be combined with other sources
- ▶ For example, data in Wikipedia can be extracted using dedicated tools
 - e.g., the “[dbpedia](#)” project can extract the “infobox” information from Wikipedia already...

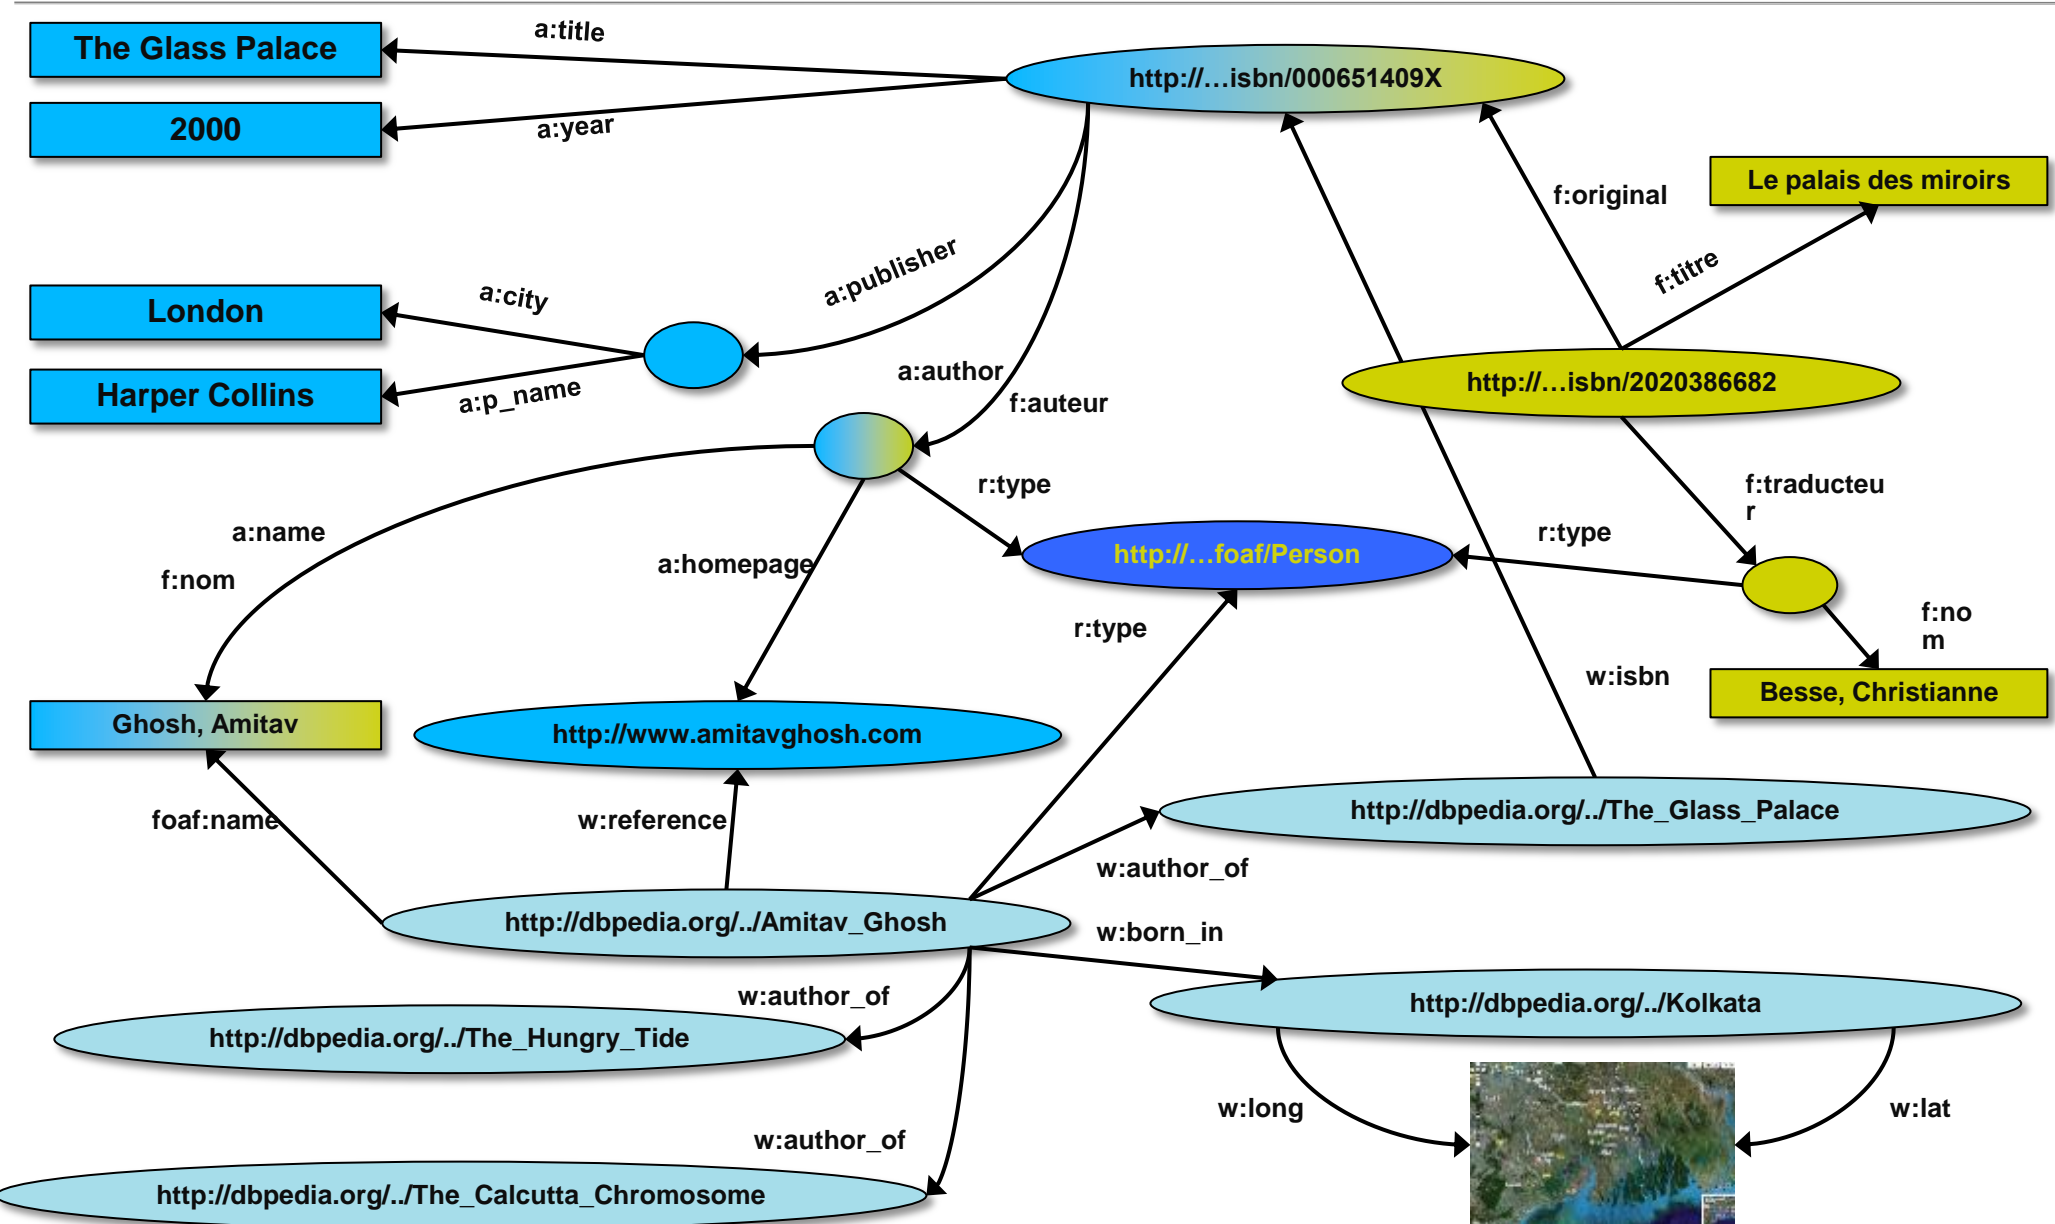

Merge with Wikipedia data

Merge with Wikipedia data

Merge with Wikipedia data

Is that surprising?

- ▶ It may look like it but, in fact, it should not be...
- ▶ What happened via automatic means is done every day by Web users!
- ▶ The difference: a bit of extra rigour so that machines could do this, too

It could become even more powerful

- ▶ We could add extra knowledge to the merged datasets
 - e.g., a full classification of various types of library data
 - geographical information
 - etc.
- ▶ This is where ontologies, extra rules, etc, come in
 - ontologies/rule sets can be relatively simple and small, or huge, or anything in between...
- ▶ Even more powerful queries can be asked as a result

What did we do? (cont)

Applications

Manipulate Query
...

Data represented in abstract format

Map, Expose,
...

Data in various formats

The abstraction pays off because...

- ▶ ... the graph representation is independent of the exact structures
- ▶ ... a change in local database schema's, XHTML structures, etc, do not affect the whole
 - “schema independence”
- ▶ ... new data, new connections can be added seamlessly

The network effect

- ▶ Through URI-s we can link any data to any data
- ▶ The “network effect” is extended to the (Web) data
- ▶ “Mashup on steroids” become possible

So where is the Semantic Web?

- ▶ **The Semantic Web provides technologies to make such integration possible!**
