Instructions to configure IGB and run SimilaritySearch desktop application

- 1. Extract all the content of the archive SimilaritySearch.
- In case you downloaded the basic version of the app, please add an executable jar file (*igb_exe.jar*) of IGB in the folder <archive path>/SimSearch.
- 3. Launch igb_exe.jar file contained in the <archive path>/SimSearch folder
- 4. If you decided to use the quickload repository to improve the performances, configure the quickload option of IGB to point to *archive path>/igb/quickload* folder (it is really convenient to reduce the time to start the application):
 - In the File menu of IGB select Preferences ...

- 5. Configure the plugin repository (needed to use the functionality that allows users to extract a pattern directly from IGB):
 - In the File menu of IGB select Preferences...

- Select the Plugin Repositories tab

- Enter a name for your plugin repository (e.g., My Plugin Repository)
- Press the Chose local folder button and select as folder igb/plugins

- Warning: before pressing Submit, check the URL of the repository. It must NOT contain C:/ (i.e., it must look like *file:/<archive* path>/igb/plugins)
 - <complex-block>
- Press the submit button

- You should see a plugin called PatternExtractor, control that it is correctly installed (i.e., the checkbox must be selected)

- In the bottom tab menu of IGB select the Plug-ins tab

 In the same bottom tab menu of IGB you should now see the Pattern Extractor tab

6. Run the SimilaritySearch.jar file, contained in the *<archive* path>/SimSearch folder, to start using our application.
